## Introduction

With 8 years of experience as a Product and Service Designer, I have consulted on projects with notable companies such as Verizon, USBank, Synchrony Bank, Catapult Learning, and Adam Smith International.

I am passionate about developing solutions that address complex problems, reduce complexity, and ensure accessibility for all. I am particularly interested in civic tech, growth, sustainability, and design systems.

My skill set includes UI/UX design, wireframing and prototyping, design systems, user research and testing, conceptual design, and front-end development.

## Work Experience

### Product Design Consultant

Remote    Nov 2023 – Present

### Code for Pakistan

Design Volunteer  
Islamabad    Sep 2023 – Present

### Method

Senior Product Designer  
New York    Jan 2022 – May 2023

### Polly

Product Designer  
Remote    Sep 2020 – Aug 2021

### 3 other workplaces

Aug 2016 – Sep 2020

Introduction

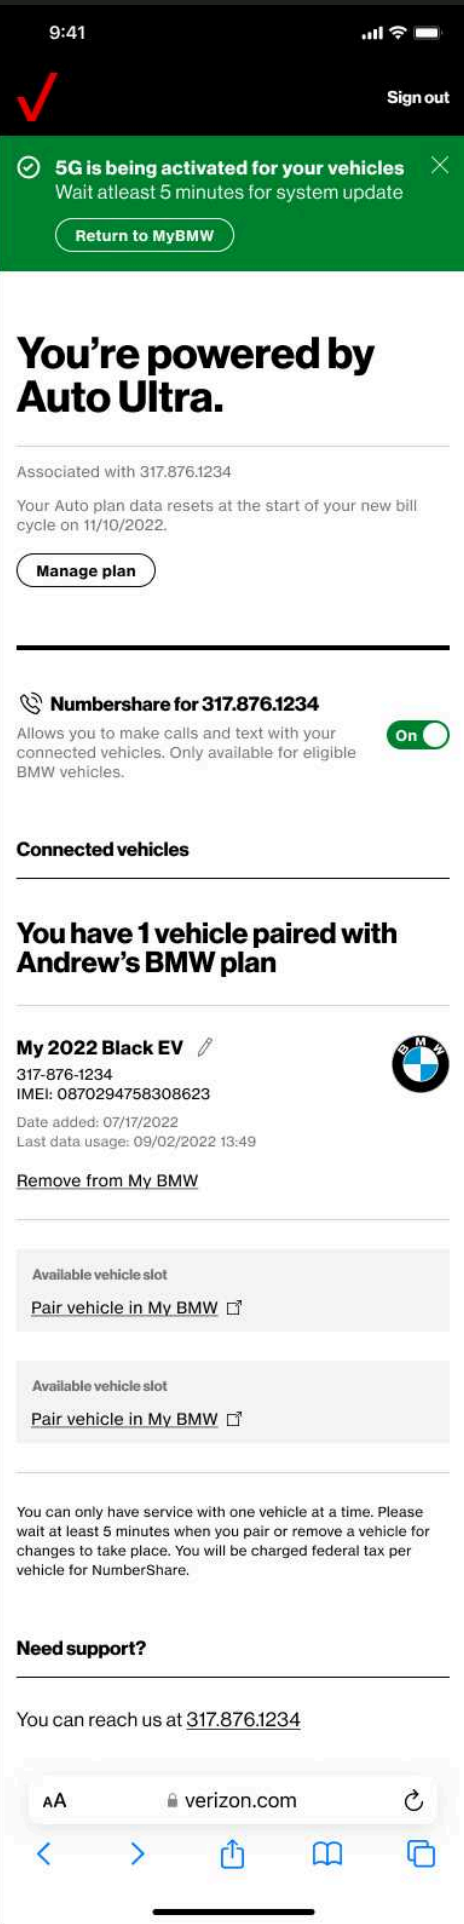

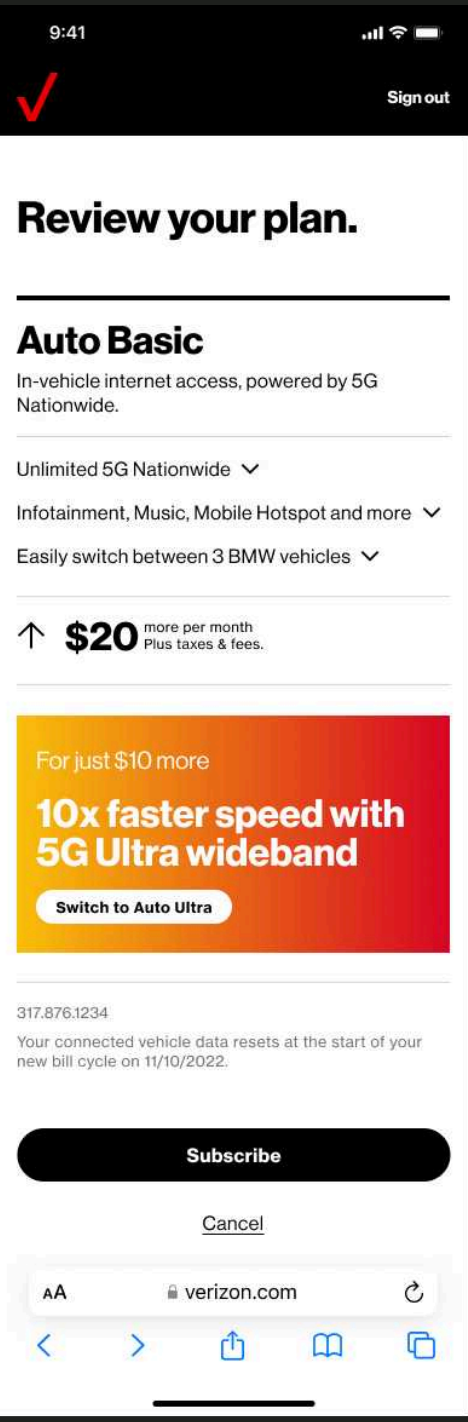

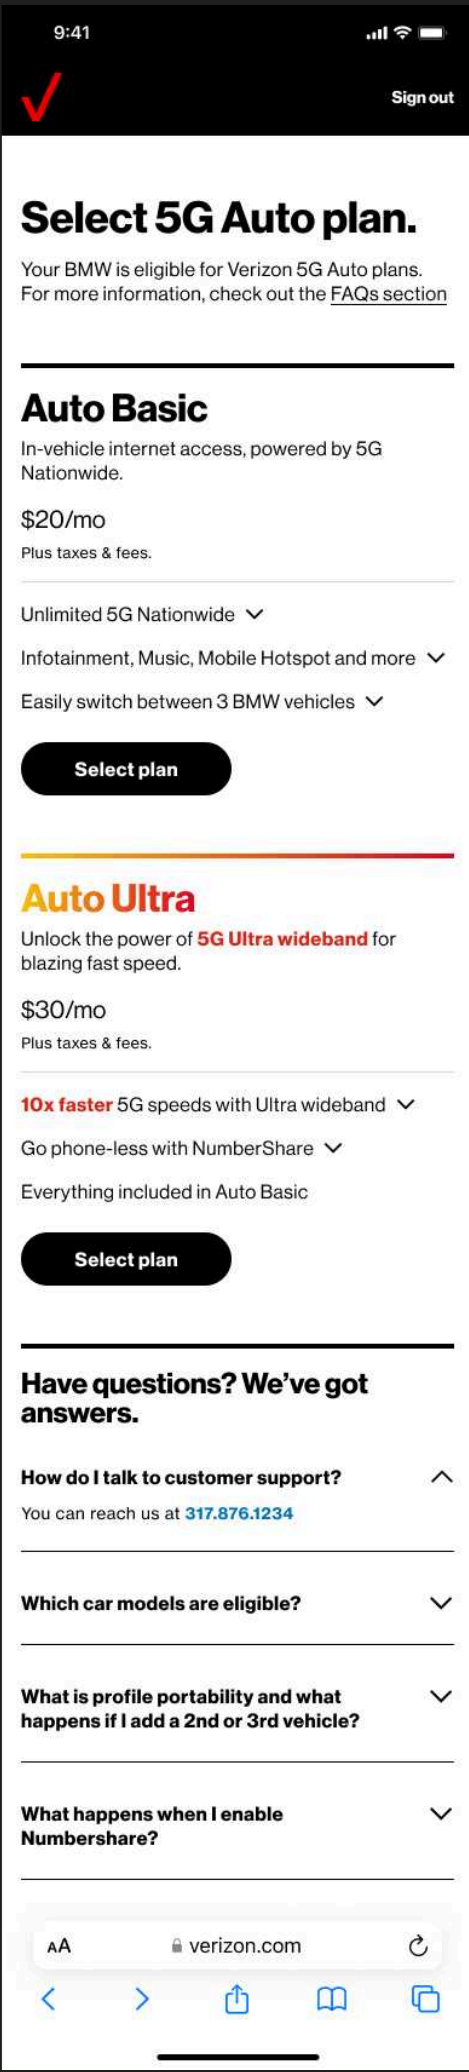

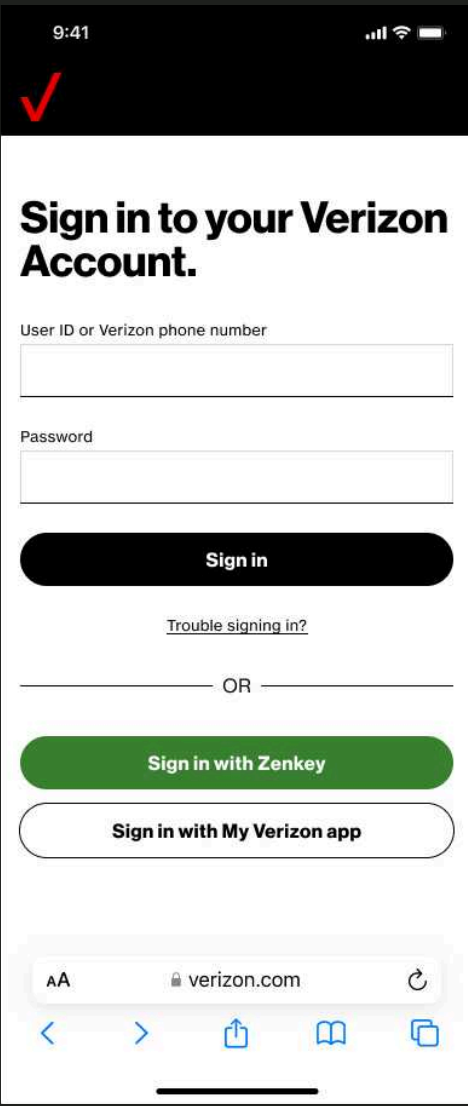

Verizon approached Method to help them design a microsite that allows BMW customers to purchase a Verizon Connected Car plans from the BMW app.

The microsite is a web experience inside the native BMW app. It as divided into 3 sections for the design stage: Onboarding, Account management and Edge cases.

I worked in a team of 4 along with the Verizon team to deliver designs in 5 weeks.

Design Process

1. Conducted multiple workshops with Verizon to understand the process that they had envisioned and document all relevant scenarios for the microsite.
2. Mapped out user flows to validate our understanding with the client.
3. Adopted Verizon’s design system, branding and guidelines for the microsite’s visual design.
4. Designed final mockups and made them into a clickable prototype to present internally.

Catapult Learning

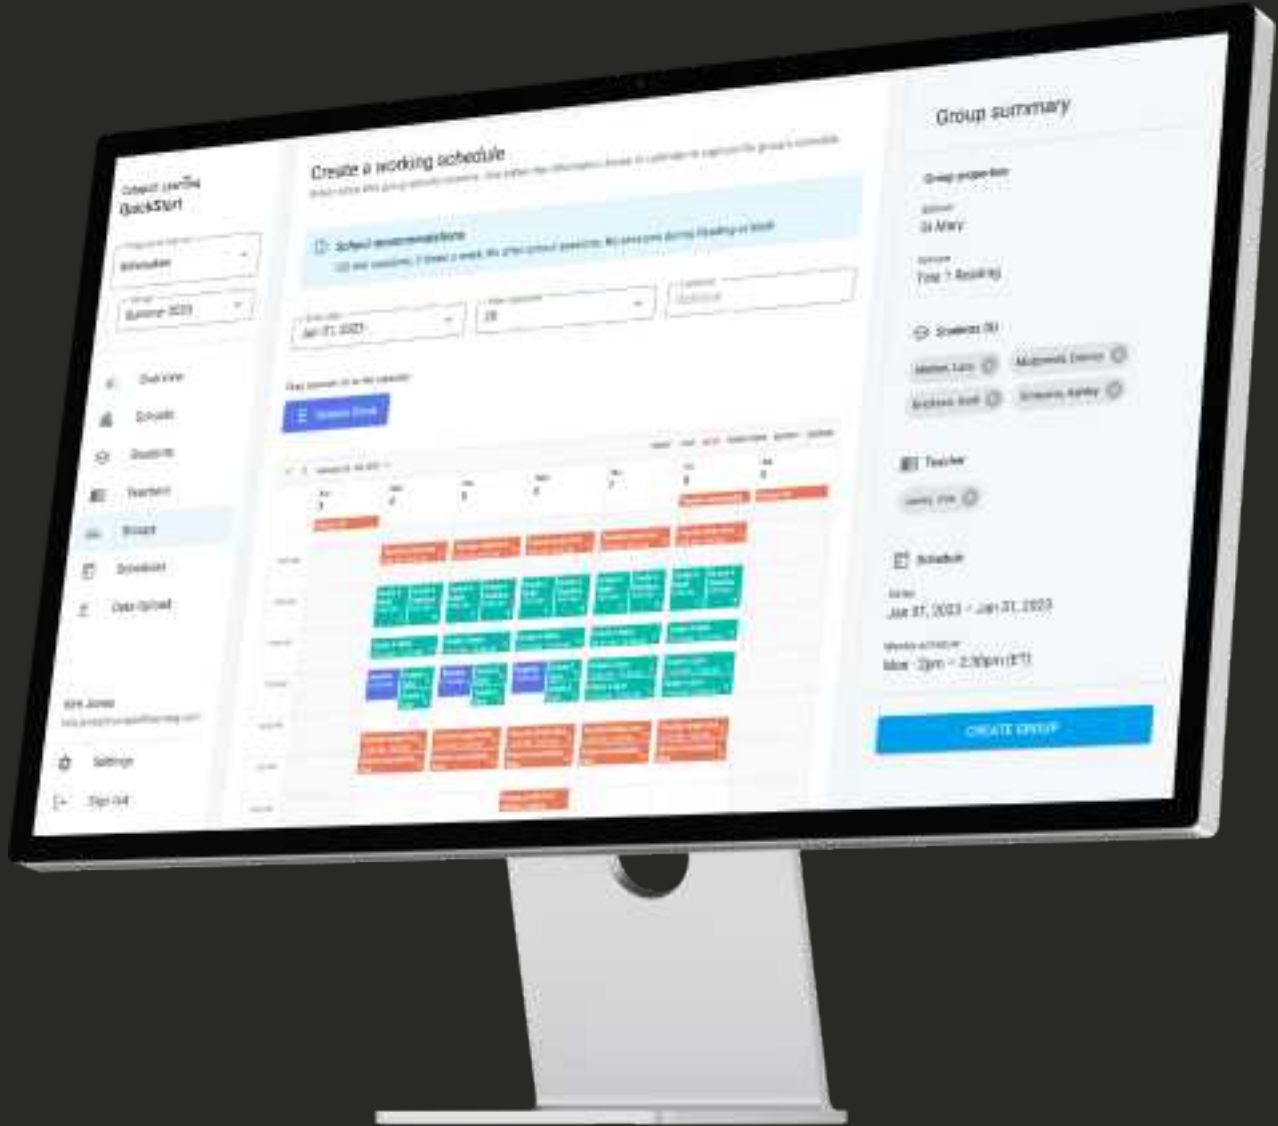

FullBloom

METHOD

# Centralizing the class scheduling process to offer more context and visibility

Incorporating user interviews, user flows, wireframing, and prototyping to designs a scheduler tool, within a timeframe of six weeks.

UI design • Prototyping • Design handoff • MUI component library • Wireframing • User flows • Discovery workshops

Introduction

Catapult Learning, part of FullBloom, is a K-12 intervention classes provider functional in 41 US states.

The company works with school districts along with public and private schools to identify students with intervention needs and arrange classes in subjects such as Reading, Maths, Communication etc.

Method was brought on to develop a scheduling tool that would help address these problems. I was the design lead to support with user research, create user flows, make wireframes and prototype the final designs.

The caveat was that all the design work was scoped for only 6 weeks by the client.

Problem Statement

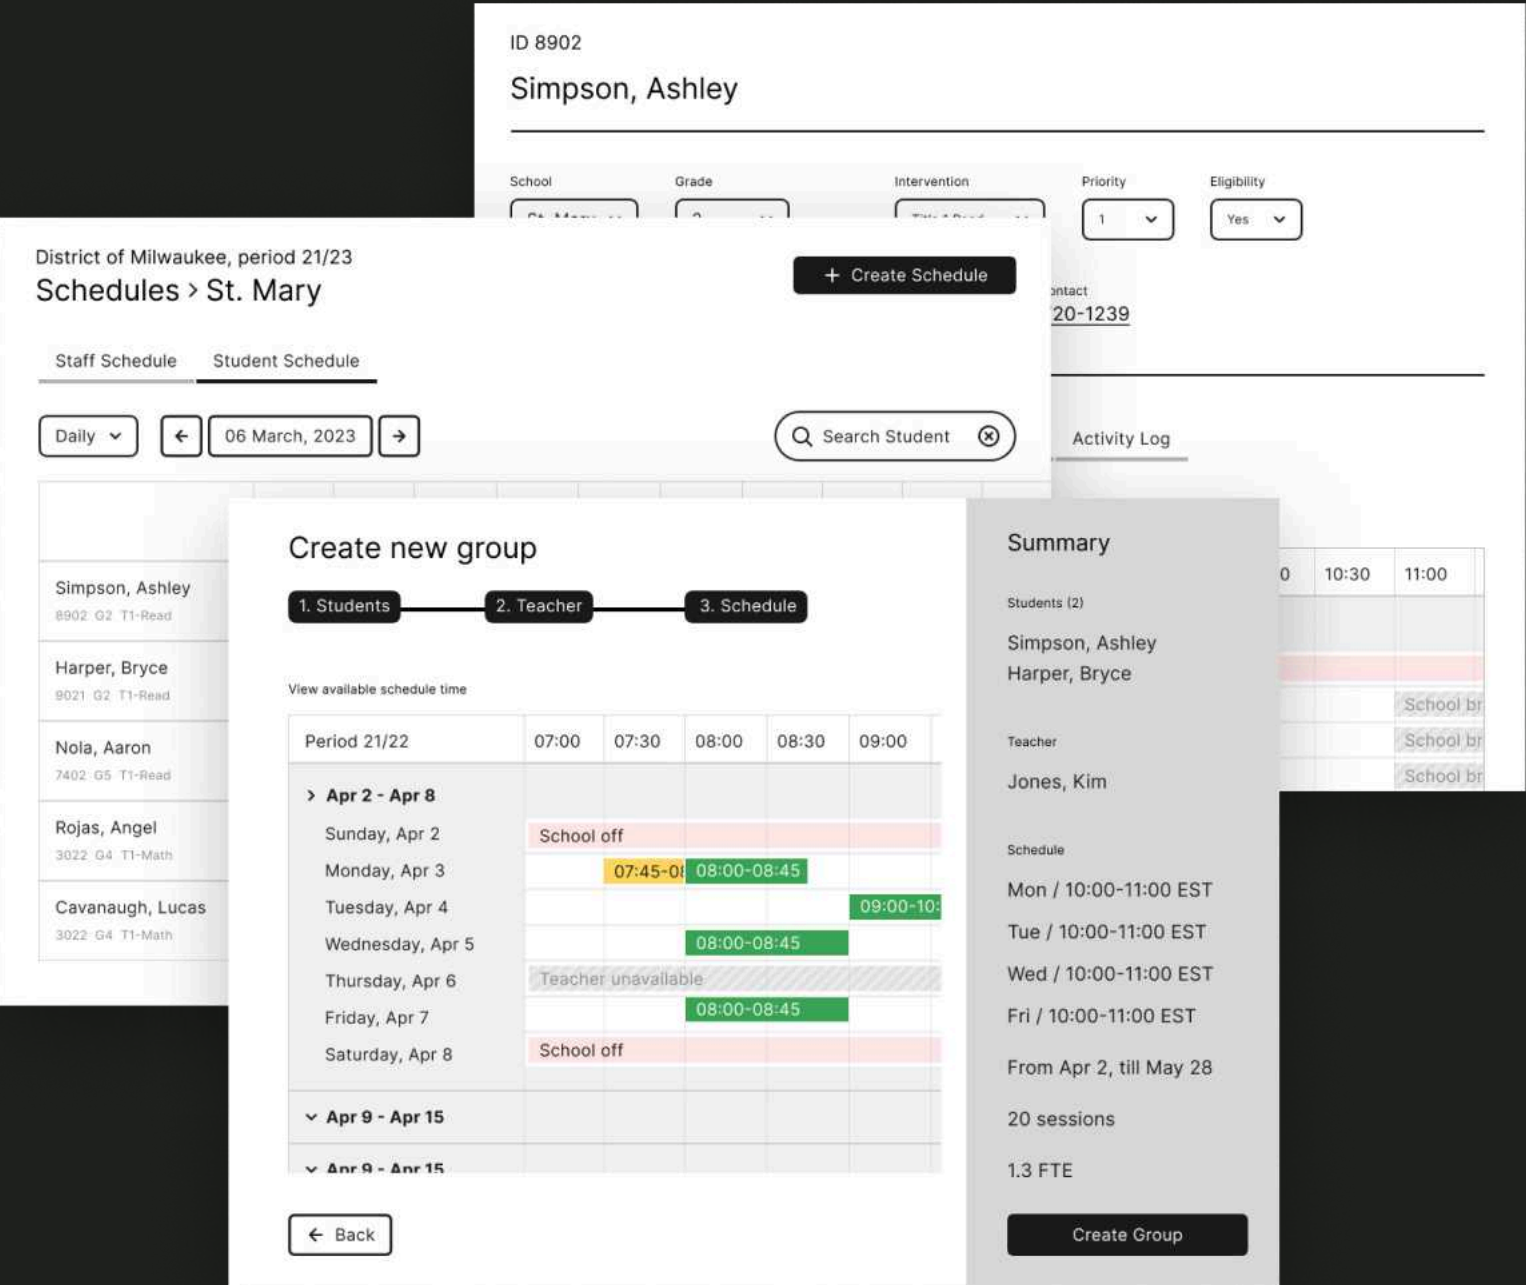

The process scheduling an intervention class was manual and disjointed.

In order to create a schedule, an operator (end user) had to:

- Compile schedules of all the schools in a district before each term.
- Extract student and teacher information out of dated softwares.
- Stitch together excel sheets and validate for errors or duplicates.
- Figure out a working schedule manually and socialize that with schools, teachers and students through paper.

Design Process

1. Made user flows from requirements and current understanding of the process.
2. Conducted 6 workshops with operators from 3 school districts of Philadelphia, Milwaukee and New York.
3. Designed wireframes, validated with operators and incorporated their feedback into new iterations.
4. Pivoted from original approach and reprioritized design direction after considering feedback from operators.
5. Designed High Fidelity designs using MUI design system.
6. Worked closely with developers to handoff designs that utilized the corresponding React component library.
7. Presented final designs to the Catapult Learning steering committee to high praise and positive reception.

Adam Smith  
International

# Improving the Tax Registration Experience for better Usability, Simplicity and Legal Compliance

Independent consultant for Pakistan’s federal tax authority, FBR to redesign the registration process for the Income and Sales tax e–government portal, IRIS.

Service Design • Conceptual Modelling • Discovery Research • User Flows • Wireframing • UI design • Prototyping

Introduction

I was hired as an independent consultant by Adam Smith International under the REMIT project by the UK government’s FCDO department.

The engagement was to support Pakistan’s federal tax authority, FBR improve registration process for IRIS, the Income and Sales tax e–government portal used by millions of citizens.

Worked in collaboration with the project lead, tax experts and FBR’s Chief of IT.

Problem Statement

- The current IRIS system was notoriously hard to use. Some key areas were identified:
- 1. Most users relied on tax accountants or practitioner instead of using themselves.
  - 2. Lack of trust with the service as fear of filing taxes incorrectly.
  - 3. Bad information architecture and jargons made understanding the system difficult.
  - 4. Multiple scenarios were broken up into separate forms instead of a unified experience.
  - 5. Not complying with rules set by tax laws.

Design Process

Discovery Research

- Current–state analysis
- Stakeholder interviews
- Mapping tax laws
- Best practices

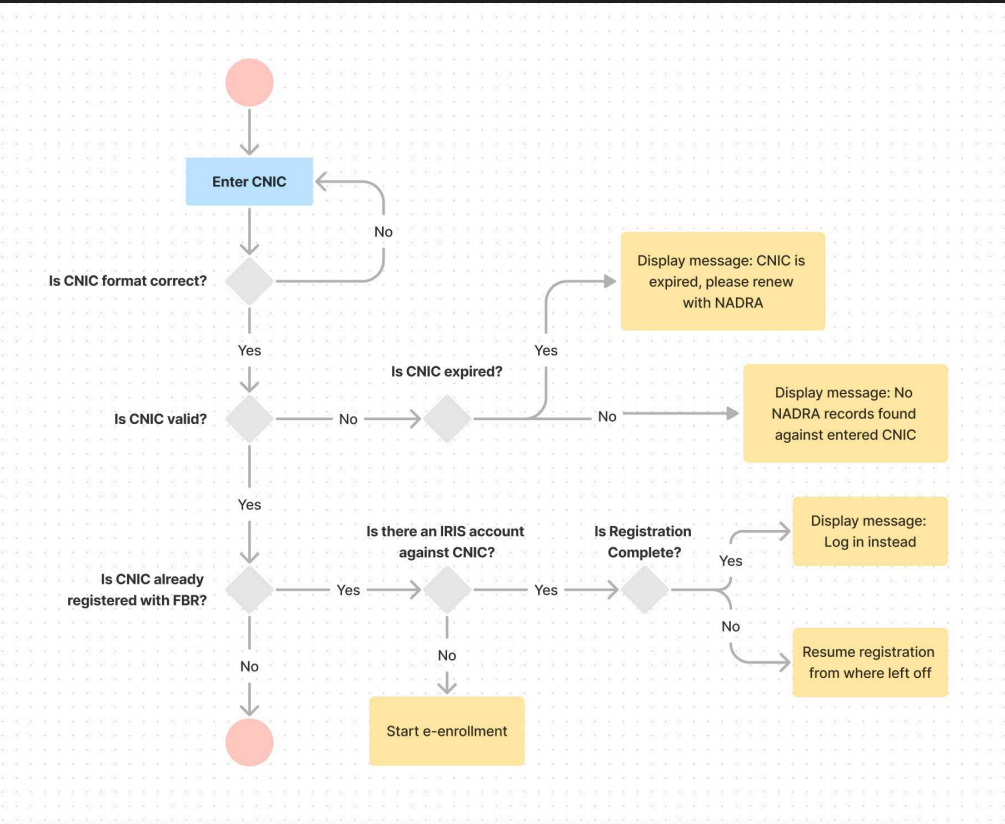

Conceptual Design

- Future–state conceptual model
- Process diagrams
- Wireframes

Detailed Design

- Design System
- UI Designs
- Prototyping
- Reviews and handoffs

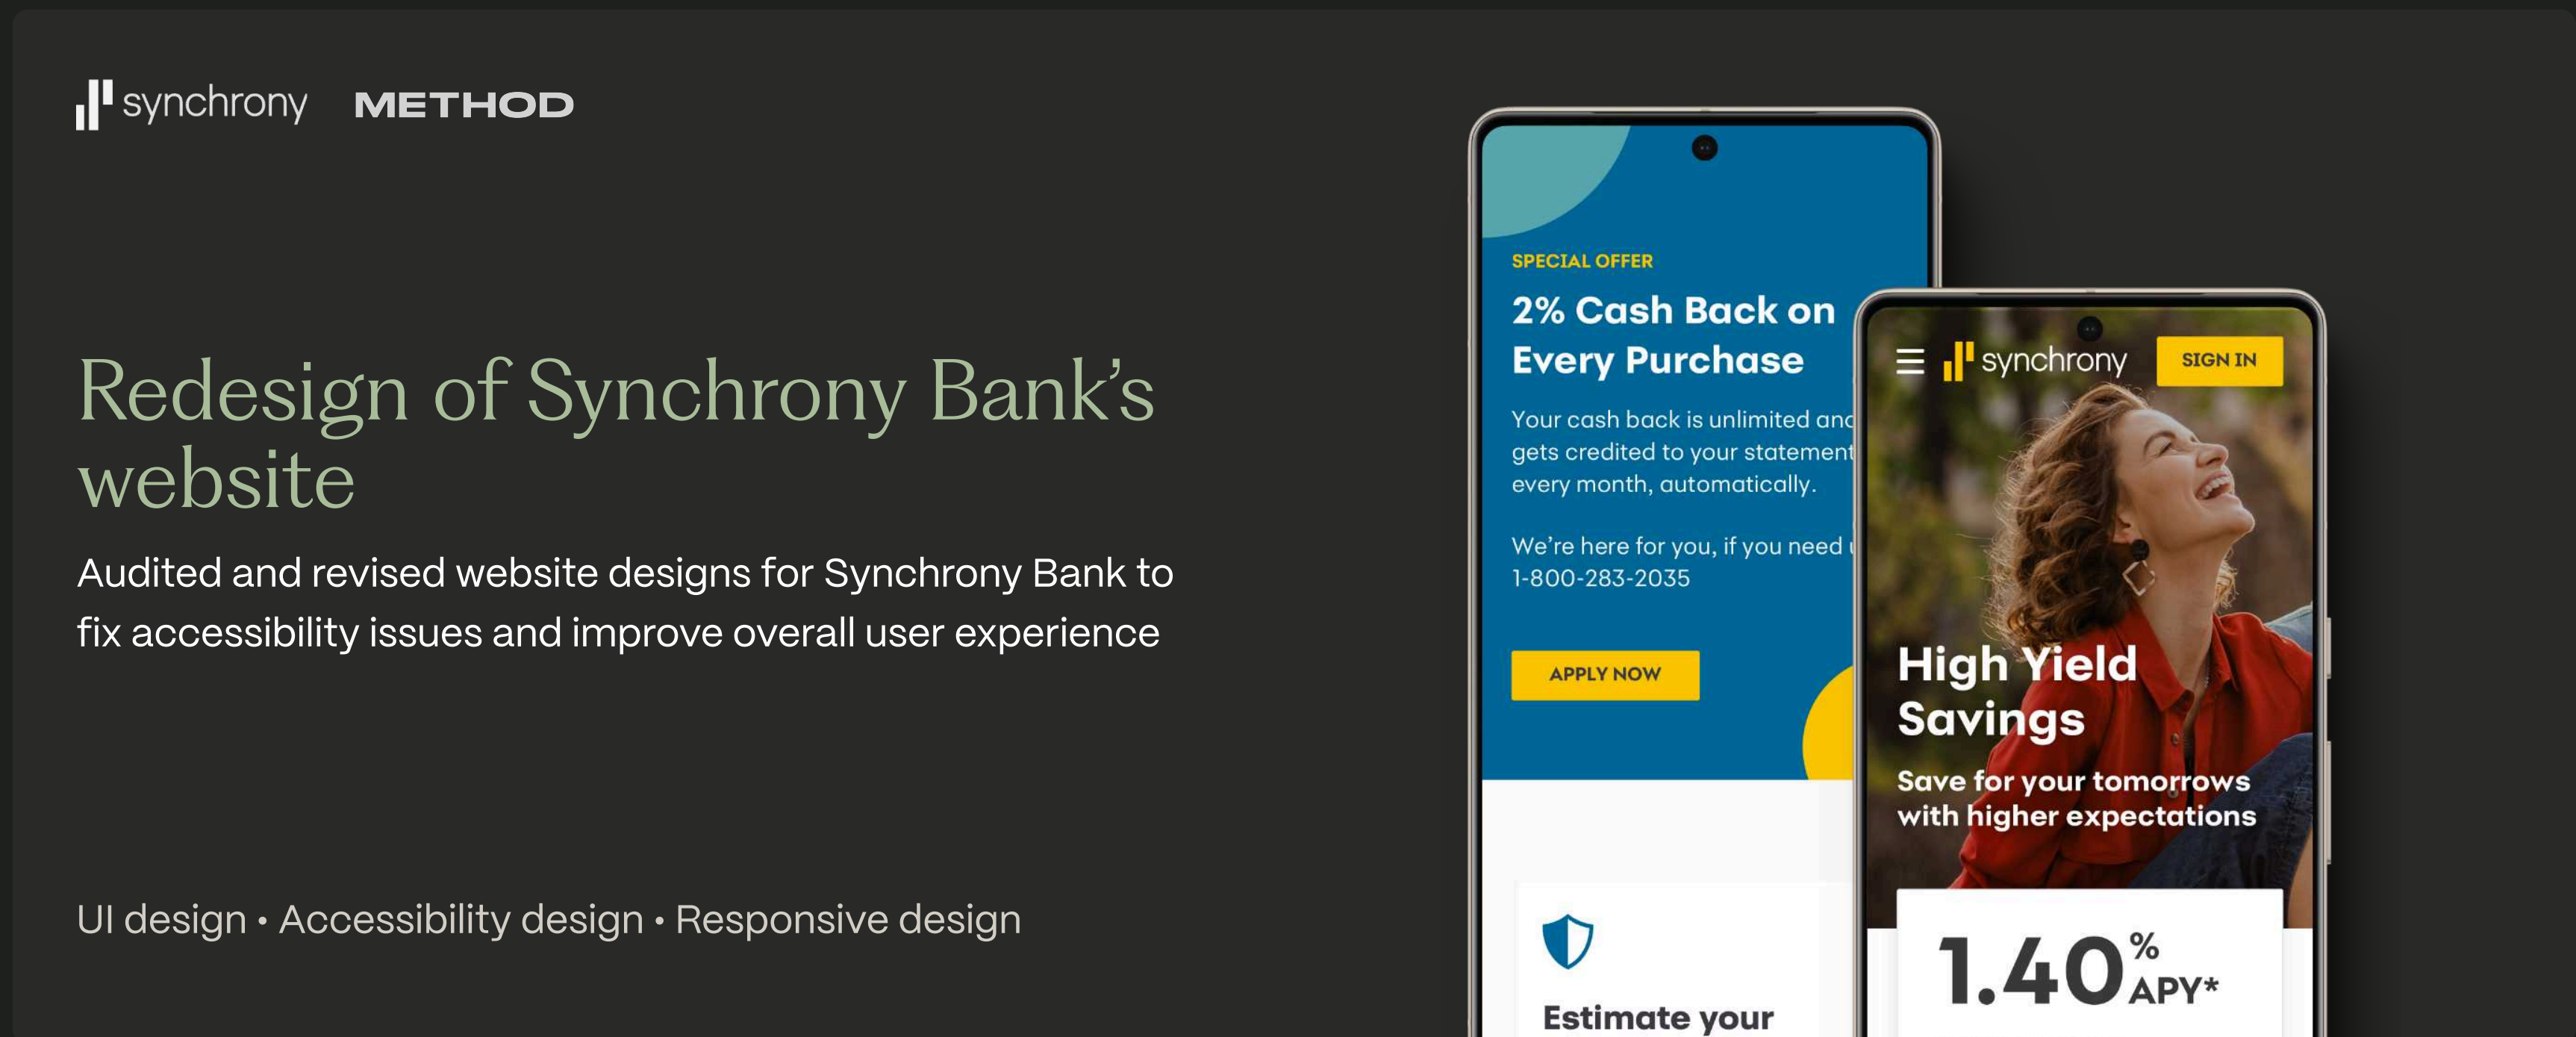

Process diagrams

Wireframes

UI Designs

## Projects

## Introduction

Synchrony Bank contracted Method to help them with website designs for [www.synchronybank.com](http://www.synchronybank.com).

The project focused on overhauling unsatisfactory internal designs, particularly addressing UX issues in the calculator web components used for financial planning.

The team also aimed to ensure accessibility compliance by refining visual design, improving navigation, and integrating screen reader compatibility and keyboard navigation. The goal was to create a more intuitive, user-friendly interface that met the bank's branding and provided an inclusive digital experience.

## Final Designs

I provided T-shirt sizing versions (XL, L, M, S) for each view to accommodate different screen sizes.

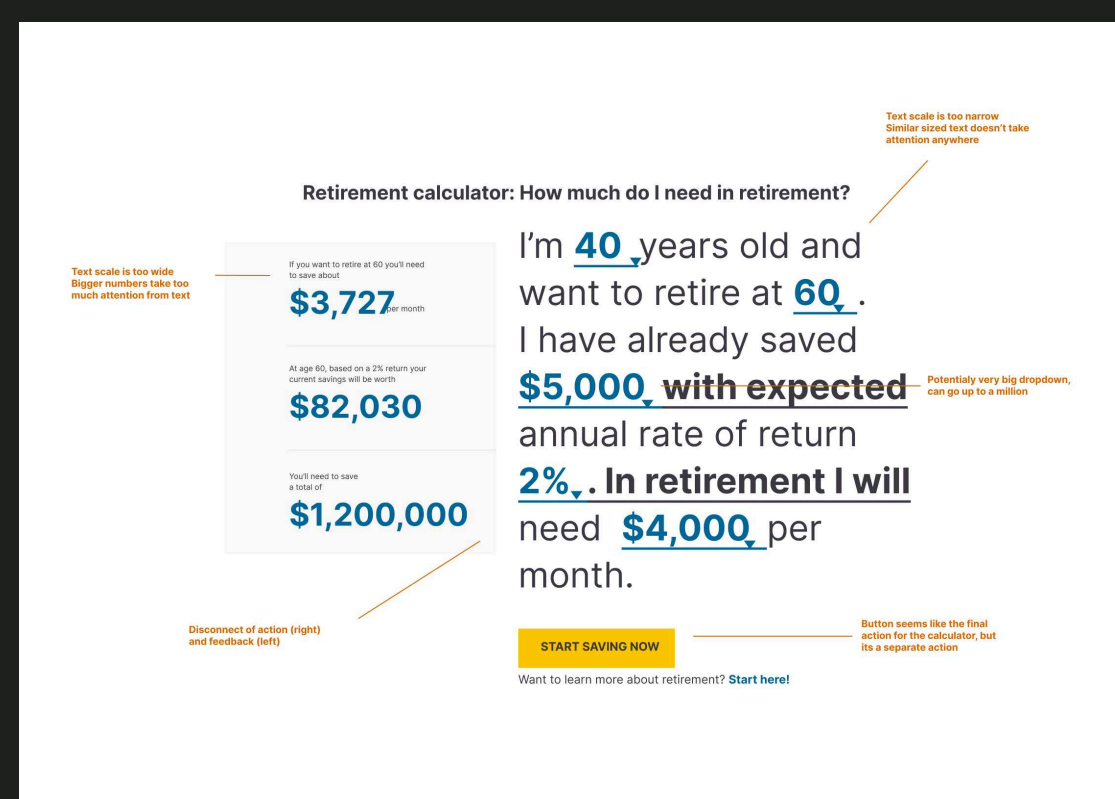

The final designs went live on the website in August 2023

[www.synchronybank.com](http://www.synchronybank.com) ↗

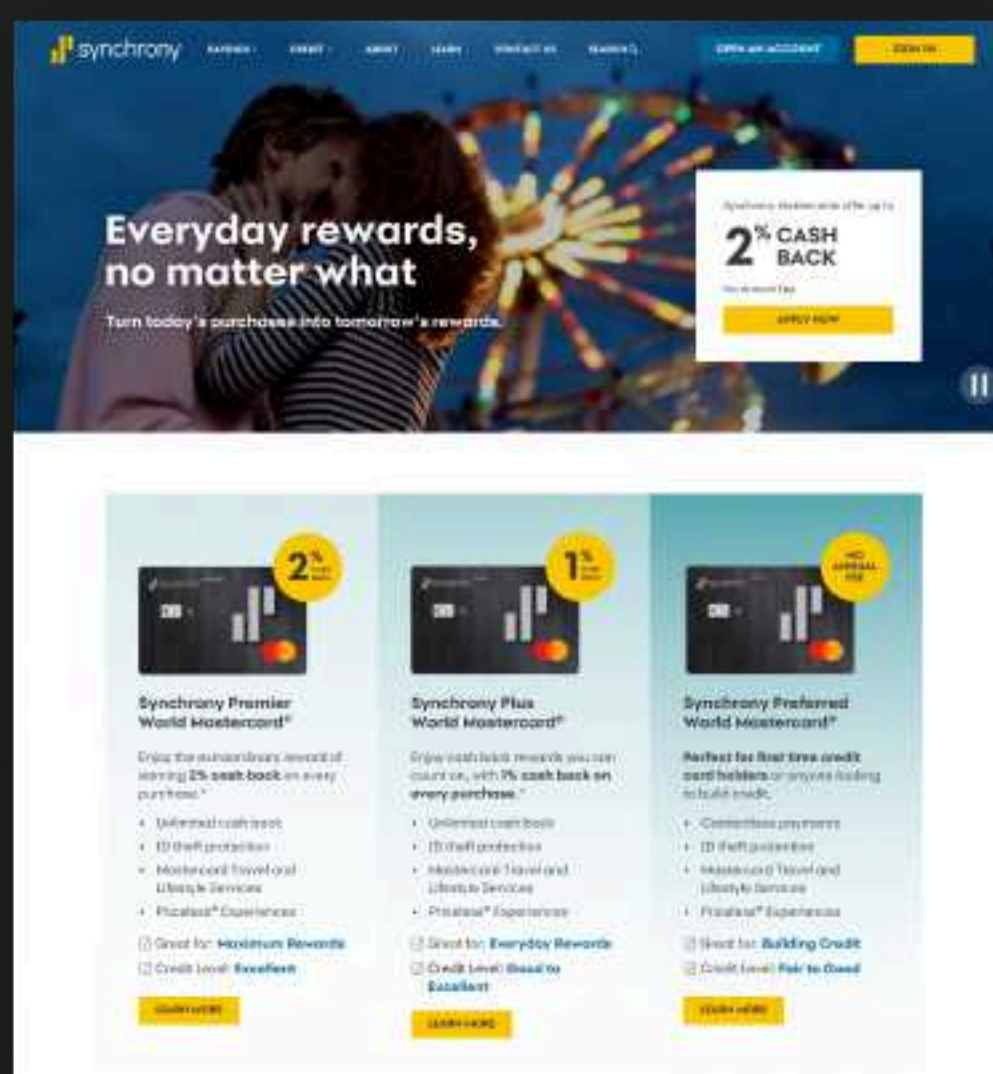

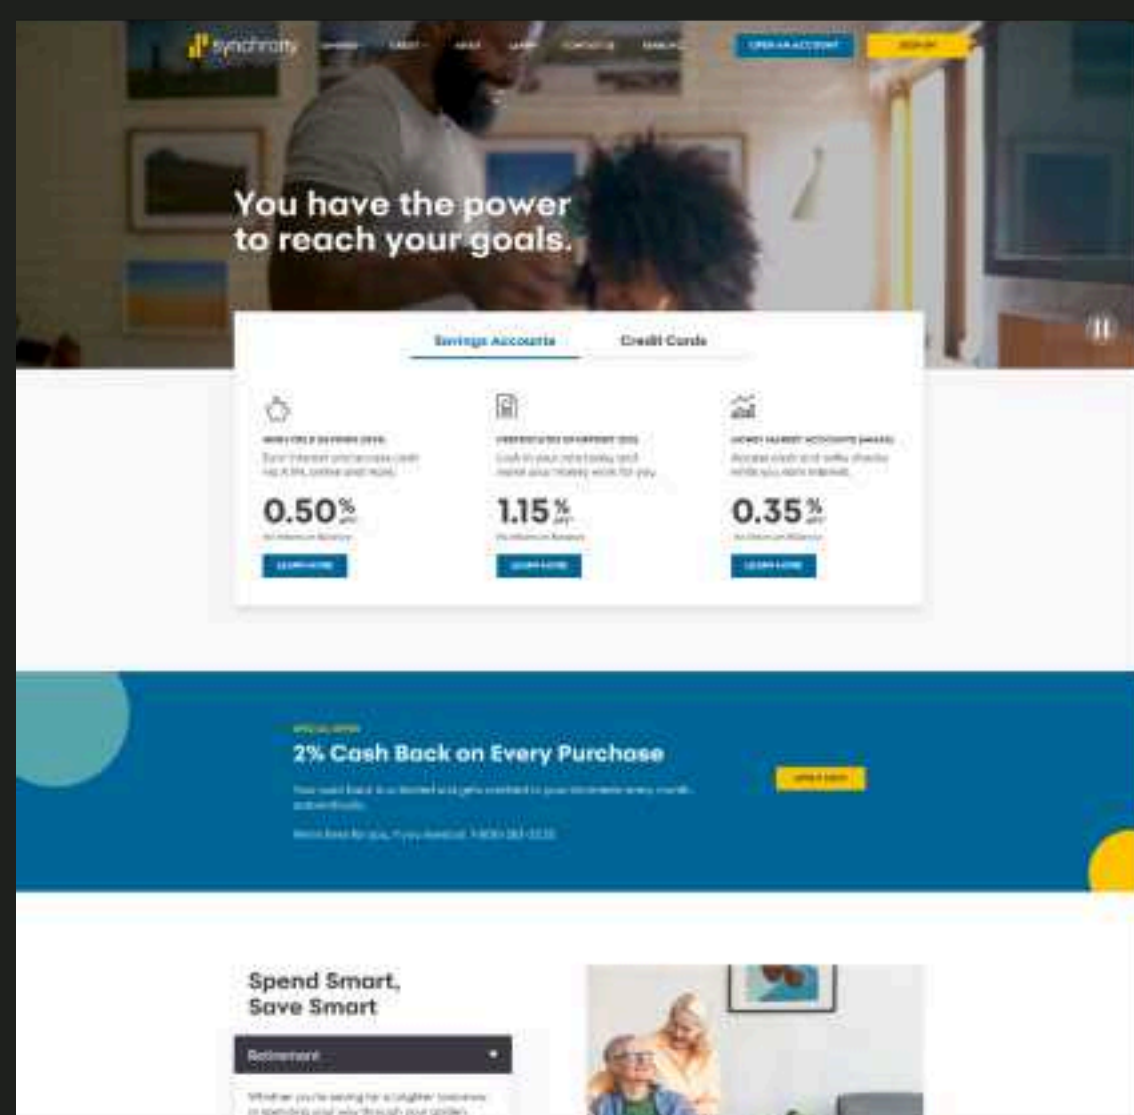

## Design Process

I conducted a critique of their internal designs to highlight key issues and outline my approach.

This helped them understand my process and instilled confidence in the final deliverables. I ensured the new designs aligned with their existing design system to maintain brand consistency across all products.

## Critiquing designs made by the internal team

Competencies

User Experience (UX) design • User Interface (UI) design • Prototyping • Wireframing • Design Systems • User Testing • Service Design • Conceptual Modelling • Discovery Research • Service Blueprinting • User Flows • Information Architecture • Web Accessibility • Product Analytics

Tools and skills

Figma • Sketch • HTML & CSS • Webflow • Maze • Miro • FigJam • Framer • Spline 3D • Adobe Creative Cloud • Conversion Rate Optimization • SEO • SQL queries

Testimonials

*“Without question, Masna is missed here at Method, but any team that has the opportunity to work with him in the future would be fortunate to experience the positivity and curiosity he brings to everything he does.”*

Mike Rogers  
Director of Product Design at Method

*“Any company would be lucky to have him as he has got the full package.”*

Omer Kahoot  
Software Development Engineer II at Amazon

*“He's well organized, quick to learn, and very comfortable wading into complex technical problems.”*

James Zerkel  
Lead Product Designer at Polly

*“In addition to his design skills, he is a talented communicator, who can work with a variety of stakeholders.”*

David Teixeira  
Principal Program Manager at Method
